DALI settings duplication with a couple of taps

The DALI Copy & Paste function on Quicktag, an NFC-powered application enables quick and easy duplication of DALI address and settings from one DALI driver to another.

Using the Quicktag application on an NFC-equipped mobile device, all it takes is to tap the mobile device on one DALI driver to copy its configured DALI address and settings, then another tap on a new DALI driver to duplicate the DALI address and settings over.

This function is particularly convenient in terms of maintenance and fault replacements, saving time and hassles, as compared to conventional means of reconfiguring DALI address and settings onto a new replacement DALI driver via configuration software by connecting the DALI system to a PC or laptop.

Simple steps to Copy & Paste DALI address and settings with Quicktag
